Anti-Melanosis Crustacean Treatment SeaFresh

SeaFresh is a novel anti-melanosis treatment specifically designed to inhibit browning and blackening of fresh Crustacean. Applied in a simple bath, SeaFresh binds to the enzymes responsible for the melanosis and completely inhibits the darkening reactions. In contrast with sodium metabisulphite solutions, which are corrosive and can cause serious and expensive damage to plant and equipment in processing factories, SeaFresh is very easy to use and completely non-residual. A simple 2 minute bath will ensure that your fresh crustacean will retain their bright color and a long shelf life of up to 7 days.

Fresh Shrimp and Crustacean Black-Spot Treatment

- Effective anti-melanosis treatment
- Inhibits the unwanted enzymatic blackening
- Works in a wide range of crustacean
- Easy to use, non-residual product and safe to handle
- Very low dosage compared to traditional methods
- Fast dipping and draining times
- Keeps shrimps and prawns fresh for up to 7 days
- Can be used with both fresh water and brine
- Ideal for use both on and off shore
